DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-34 are rejected under 35 U.S.C. 102(e) as being anticipated by Hall (US 6,071,240). Hall discloses a method for ultrasound imaging through obtaining data from transducers across a receive aperture (Col 1 Line 60-Col 2 Line 15), determining coherence factor (Col 7 Line 10-60), and setting a beamforming parameter as a function of coherence (Col 4 Line 15-55), calculating a ratio of coherent to incoherent sum (Col 7 Line 60-Col 8 Line 40, Col 2 Line 40- Col 3 Line 35), phase variance and calculating coherence factor as a function of time/phase delay (Col 7 Line 45-60, Col 6 Line 1-45). The methods also describe setting transmit parameters; receive parameters, and the individual firings of transducer elements (how many transmit, when they transmit) as a function of coherence (Col 7 Line 13- Col 9 Line 20, Col 6 Line 1-45, Col 4 Line 15-55).

Art Unit: 3737

Mathematical analysis of data is propagated as a function of coherence factor and optionally image filtering can be performed as a function of coherence factor (Col 8 Line 40-Col 9 Line 5, Col 6 Line 60- Col 7 Line 12). Hall discloses an array, a processor for determining CF across the array (Col 7 Line 45-Col 8 Line 15), synthesis of images through multiplication by the coherence factor (Col 4 Line 65-Col 5 Line 10, Col 8 Line 40 – Col 9 line 40), wherein the image processor is able to set the number of beams, size of those beams, focus of the beams, and dynamically sum the range, phase, and energy based on coherence (Col 3 Line 60- Col 4 Line 55, Col 5 Line 20 – Col 6 Line 45).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Rigby reference to the same assignee is also pertinent to Applicant's disclosure, but does not go into the same detail as the Hall reference, but should be reviewed and used for further understanding of prior art in the area of endeavor.
